### ECHO Autism: Early Intervention Speaker Disclosure

LPC, Social Work, Psychology, 50-minute hour CEs

The University of Missouri Continuing Education for Health Professions (CEHP) is part of an accredited university in the state of Missouri. As such, this program meets the requirements for Licensed Professional Counselors, Psychologists, and Social Workers with Missouri licenses. CEHP attests that this program contains 1.5 clock hours of instructional time. Licensed professionals measuring CE credit based on a 50-minute hour may claim up to 1.8 Contact Hours for full attendance at this program.

#### Relevant Financial Relationship Disclosures

Current ACCME (Accreditation Council for Continuing Medical Education) rules state that participants in CE activities should be made aware of any relevant affiliation or financial interest in the previous 24 months that may affect the planning of an educational activity or a speaker's presentation(s). Each planning committee member and speaker has been requested to complete a financial relationship reporting form for the ECHO Autism: Early Intervention Series

Kristin Sohl, MD,FAAP receives support:

•Cognoa Behavior Health – research support

•Quadrant Biosciences – medical science collaborator

All relevant financial relationships for the presenter(s) have been mitigated.

No other speaker or planning committee member has a relevant financial interest

### Collaboration = Success ABA, OT, SLP

Goal for all therapies is to work with the families: typically, families are working toward **Independence** and **Employability**

5

---

---

---

---

---

---

---

---

### Goal of Augmentative and Alternative Communication (AAC)

- Success in life = related to the ability to communicate
- Need to determine the most effective interactive communication possible
- **Unaided** = gestures, body language, facial expressions, sign vocabulary
- **Aided** = tool or device
  - Basic Aided = pen and paper or pointing to letters/words on a board
  - High Tech = speech generating devices (SGD)

### AAC

- Uses a variety of techniques and tools
- Augmentative = used to supplement existing speech
- Alternative = used in place of speech that is absent or not functional
- AAC may be temporary or permanent

### 5 keys to great AAC modeling

Modeling, aided language input, or aided language stimulation -- whatever you call it, it's pretty important in the world of AAC learning. Here are 5 simple keys that will help you become a great AAC modeler.

- 1. Just do it!**  
Don't make excuses, don't put it off. It's never too late to start. Your example is THE MOST powerful tool. Start simple, start slowly, but start!
- 2. Know the Device**  
It's pretty tough to model something you don't understand. Take some time to get to know the student's AAC so you can model with meaning.
- 3. Build a base of core words**  
Encourage them to start modeling at your table first. It's easier to model and they will learn the response.
- 4. Don't Forget the Fun Stuff**  
Modeling is not just for instructional purposes. Playdates, parties, and family time are often easier and great opportunities for modeling, model, and model some more.
- 5. Don't Quit!**  
As your learner gets better at AAC, it's easy to think, "They've got it. I can let them go." But don't leave speaking first language. They really do need you.

9

**Transitioning from AAC/PECS to SGD**

- Vocabulary has increased to the point where communication books are bulky/unmanageable
- Choose device that is lightweight, portable, and user friendly
- Consider client's receptive language skills
- Start by teaching the client to request, moving systematically through social routines, personal questions, informing, reporting, etc.
- Incorporate multiple trainings and check-ins for ALL adults who communicate with client on a daily basis (i.e., teachers, parents, siblings, etc.)
- Encourage use of SGD across ALL environments (not just for therapy sessions)
- Get consult from BCBA for setting conditions, positive behavior systems, etc.
- Get consult from OT for how to position device, mount to wheelchair, etc.
- Provide modeling and time for client to explore device

---

---

---

---

---

---

---

---

---

**Speech Generating Devices (SGD)**

- Use a voice that is appropriate to user's age, gender, race, and user preference.
- Symbols are not universal across cultures. It is important to find symbols that are relevant to the individual and his or her community.
- Symbol selection is also based on the person's ability to access, recognize, and learn that symbol's meaning.
- Work with an SLP or OT who has expertise in programing SGD

11

---

---

---

---

---

---

---

---

---

**Research Findings with AAC and SGD**

- The use of AAC does not affect motivation to use natural speech and can, in fact, help improve natural speech when therapy focuses simultaneously on natural speech development and use of AAC in a multimodal approach (Millar, Light, & Schlosser, 2006; Sedey, Rosin, & Miller, 1991).
- Intervention for minimally verbal school-age children with ASD that included use of an SGD increased spontaneous output and use of novel utterances compared with the same interventions that did not include use of an SGD (Kasari et al., 2014).
- AAC can help decrease the frequency of challenging behaviors that may arise from frustration or communication breakdowns (Carr & Durand, 1985; Drager, Light, & McNaughton, 2010; Mirenda, 1997; Robinson & Owens, 1995).
