

El Case Presentation

Response was completed on 03/07/2024 12:10pm.

Record ID

ECHO Autism Early Intervention

Ages 0-8 Years

Case Presentation Form

Brett Moore, DO; Brittney Stevenson, MOT, OTR/L; Michelle Dampf, MA, CCC-SLP; Laura Barnes, MS, BCBA, LBA; Michelle Haynam, MS Ed.

Complete this form to the best of your ability. This survey is individualized and should only be completed and submitted by the listed provider. A unique confidential patient ID number (ECHO ID) has been provided that must be utilized when identifying your patient during clinic.

Email our clinic coordinator **Sarah Towne** at <u>sarahtowne@health.missouri.edu</u> if you have any questions or comments.

PLEASE NOTE: Project ECHO case consultations do not create or otherwise establish a provider-patient relationship between any UMH clinician and any patient whose case is being presented in a Project ECHO setting.

Presenting Provider Name:	Neha Chugh-Gupta
ECHO ID:	EI0053
Clinic/Facility:	New Franklin Elementary School
	New Franklin, MO
Provider Phone Number:	573-239-5916
Provider Fax Number:	
Presentation date:	03-11-2024 M-D-Y

Patient Data

Patient Outcomes	
Who referred the child to you?	Preschool/School/Head Start ✓
How long has the child been in your care?	6 months
Has the patient received a diagnosis?	Yes 🕶
If so, when?	
By which physician?	
How long did the patient have to wait to see you?	
How long has the patient been in your care?	
Is the patient in individual or group intervention?	Individual 🗸
How often do you see the patient?	1x/week
How many sessions have you had with the patient?	1x/week
Who typically accompanies the patient to clinic appointments?	At School
How far did the patient travel to get to you office?	
Miles:	
Hours:	
Minutes:	

List the questions you would like help with.

1)

Motivation: We have tried so many things with him, but he doesn't care. Difficult to engage and motivate him. He is motivated by kinetic sand, likes rice and corn bin. But if we do a First, Then type of thing, he just doesn't care about the motivation or the reward. He really is just not motivated and will be pretty happy sitting and doing nothing. How would you work on motivating him?? He needs all ot of prompting to do anything. Can be really resistant.

We have done an interest inventory

2)

Carryover to home has been pretty low- concepts are not being reinforced. We have a PECS book, but he's not motivated to get it or use it. AAC device (Nova Chat) has been trialed but he is not interested and mom is not interested in getting one..Mom is not interested-I would love to initiate the conversation of what kind of life do you want him to have? Or what skills do you want to work on at home? Do you have any suggestions on tools or strategies to make this easier? Brother also has autism and mom has been resistant to support groups or outside resources, so it has been difficult with this student. How can we have her open up to us more or tell us what she would like a life for her child to be. She is really protective. Any resources or questionnaires you recommend that we could have her fill out.

3)

IEP goals. Goals we have had in the past year, with hopes that he would achieve this, have just not been working well all year. It feels like we are working on the same thing in different ways and we are getting no where. He often Says NO and pushes things away and is not motivated to work on much.

What is the best happy medium here for functional and academic skills?

Birth History

O Yes O No

Exposures during pregnancy:		
Exposures during pregnancy.		
☐ Smoking ☐ Alcohol ☐ Valpr	oic Acid Street drugs/other	✓ Unknown
Other:		
Gestational age:		(weeks)
		(weeks)

Were there newborn problems?		

Please check all of the following that apply:
Required intubation
Seizures
☐ Birth defects
Feeding issues in infancy
□ Other
Comments:
No complications at birth.
Dovolonment Listony
Development History
Communication Ability (Please indicate the child's highest communication/s)
Communication Ability (Please indicate the Child's highest Communication/s)
□ Nonverbal (e.g., no functional words)
✓ Uses single words
✓ Uses 2-3 word phrases
Uses sentences
☐ Chats with other
☑ Uses gestures (e.g., pointing, waving and/or leads other to wants/needs)
Behavior Concerns
✓ Short attention span
☐ Hyperactivity
✓ Obsessive-compulsive
Aggressive
☐ Hurting animals or other people
Unusual or excessive fears
Depression
Defiant
☑ Self-injury (e.g., head banging, biting, scratching, cutting, picking, etc.)
✓ Toileting issues, accidents
☐ Irritability/Moodiness
Hallucinations
Comments:
Wears a pull-up. Able to toilet independently with reminders at school. Likes to have things in a specific way, ex: when matching
or sorting- items need to be stacked exactly on top of each other. Has a very short attention span- wants to move quickly
between activities- needs frequent redirection. His self-injury behaviors are minor. When he gets frustrated he will smack his
head or his belly out of frustration.
Medical/Psychiatric History

Comments
Social Communication
A1. Deficits in social-emotional reciprocity. (Click all that apply)
Unusual social initiations (e.g., intrusive touching, licking or others)
Use of others as tools (e.g. child uses your hand to initiate a task)
\square Failure to respond when name called or when spoken directly to
✓ Does not initiate conversations
✓ Lack of showing or pointing out objects of interest to other people
☐ Lack of responsive social smile
☑ Failure to share enjoyment, excitement or achievements with others
☐ Does not show pleasure in social interactions
☑ Failure to offer comfort to others
✓ Only initiates to get help
A2. Deficits in nonverbal communicative behaviors used for social interaction (check all that apply)
☑ Impairments in social use of eye contact
Impairment in the use and understanding of body postures (e.g. facing away from listener)
Impairment in the use and understanding of gestures (e.g. pointing, waving, nodding head)
Abnormal volume, pitch, intonation, rate, rhythm, stress, prosody or volume in speech
✓ Lack of coordinated verbal and nonverbal communication (e.g. inability to coordinate eye contact or body language with words)
A3. Deficits in developing, maintaining, and understanding relationships
☑ Inability to take another person's perspective (4 years or older)
☑ Does not notice another person's lack of interest in an activity
Lack of response to contextual cues (e.g. social cues from others indicating a change in behavior is implicitly requested)
☑ Inappropriate expressions of emotion (laughing or smiling out of context)
✓ Lack of imaginative play with peers
✓ Does not try to establish friendships
✓ Lack of cooperative play (over 24 months of age)
✓ Lack of interest in peers
✓ Withdrawn; aloof; in own world
✓ Prefers solitary activities
, <u> </u>

Restricted/Repetitive Behavior

bit. Stereotyped of repetitive motor movements, use of objects, or spectif	
☐ Lining up toys	
☑ Nonfunctional play with objects (Examples: dropping items repetitively, holding objects for long periods of time without	
purpose)	
Repetitively turns on/off lights	
☑ Echolalia	
ldiosyncratic phrases (Example: "crunchy water" for ice)	
Hand flapping	
Rocking	
Flicking fingers in front of eyes	
Opening/closing doors	
Spinning	
Unusually formal language (Example: little professor talk)	
☐ Jargon or gibberish past developmental age of 24 months	
Use of "rote" language	
Pronoun reversal and/or refers to self by own name	
☑ Repetitive vocalizations (Examples: unusual squealing, repetitive humming)	
Abnormal posture (Examples: toe walking, intense full body posturing)	
Excessive teeth grinding	
Repetitive picking	
B2. Insistence on sameness, inflexible adherence to routines, or ritualized patterns of verbal or nonverbal behavior	
□ Difficulty with transition	
Unusual routines	
Repetitive questioning about a particular topic	
Extreme distress with small changes	
Rigid thinking patterns (Examples: inability to understand humor or nonliteral aspects of speech such as irony)	
Greeting rituals or other verbal rituals	
Compulsions (Example: must turn in a circle three times before entering a room)	
Need to take some route or eat same food every day	
Need to take some route or eat same rood every day	
B3. Highly restricted, fixated interests that are abnormal in intensity or focus	
☐ Strong attachment to or preoccupation with unusual objects (Examples: fans, elevators)	
Excessively circumscribed or perseverative interests (Examples: dinosaurs, alphabet, shapes)	
☐ Being overly perfectionistic	
Excessive focus on nonrelevant or nonfunctional parts of objects (Example: overly focused on wheels on car)	
Attachment to unusual inanimate object (Example: measuring cup or ring from canning jar)	
Unusual fears (Example: people wearing earrings or hats)	
B4. Hyper- or hypo-reactivity to sensory input or unusual interest in sensory aspects of the environment	
Apparent indifference to pain/temperature	
Adverse response to specific sounds or textures (Examples: tactile defensiveness, significant aversion to nail cutting)	
Excessive smelling, licking or touching of objects	
Usual fascination with lights or movement (Examples: close visual inspection of objects or self for no clear purpose)	
Excessive movement, seeking behavior
