

# Constipation

## Brief Informational Guide

Many children have constipation. Children on the autism spectrum might have more problems with constipation than other children. Difficulty with things like sitting on the toilet and eating different foods can make treating constipation challenging. 85% of autistic children have concerns for constipation.

### What is it?

#### When a child has:

- Hard stools
- Pain or trouble passing stool
- Less than three stools per week

### Treatment Options

#### Dietary changes:

- Increase Fiber
- Drinking More Water

#### Behavior Changes:

- Regular Exercise
- Bowel Habit Training

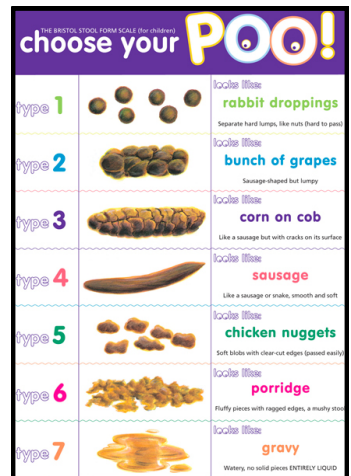

#### Medicine

### Some Common Causes

- Withholding Behavior
- Pain with Stooling
- Medications
- Routine Changes
- Diet

### Praise Efforts

Celebrate your child's progress. Praise their attempts, even if they make mistakes. Expected treatment duration is 4-6 months and positive reinforcement can boost their confidence and motivation.
